

Pilot Program – Minion Enterprise

MinionWare is launching a **60-day Pilot Program for Minion Enterprise**, our flagship enterprise management software.

The Software

Minion Enterprise (M.E.) helps SQL Server database teams **manage and maintain dozens or hundreds of servers**.

A data team who uses M.E. has essentially automated the famed “DBA daily checklist”, in addition to *dozens* of other – traditionally manual – tasks such as index analysis and Availability Group status checks.

Just a few of these automated tasks include consolidated, smart alerts for:

- changes to high level security
- SQL Server service and database status
- backups, maintenance, and job failures
- critical errors and events found in SQL Server error logs
- high disk usage
- high replication latency

The Program

The aim of the Pilot Program is to work closely with your shop to use M.E. to **achieve company-specific benefits**; and, to **gain feedback we can use** internally and as testimonials.

The program will consist of:

- An initial assessment call.
- A 60- license of Minion Enterprise.
- Short weekly calls to collaborate on questions, issues, and wins.
- Permission to use positive feedback for marketing purposes when your company sees positive results.

Benefits

Just a few of the benefits of this Pilot Program are:

1. **Broaden your horizons.** Two Microsoft Certified Masters in SQL Server are running the program...you’re guaranteed to learn some things along the way.
2. **Deepen your insight.** Using Minion Enterprise will give you insight into your environment like you’ve never seen before.
3. **You’ll pay down technical debt.** You can do a lot of good in a SQL Server environment when you have 60 days of free SQL tools.
4. **It’s in the budget!** The Pilot Program is a no-cost venture.
